SUMMARY

Full stack engineer with 2 years of backend-heavy experience building distributed microservices and shipping them to production on AWS and GCP. Designed saga-orchestrated Temporal workflows with compensating transactions across order, shipment, invoicing, and ERP services for a B2B platform processing ₹2,000 Cr+ in transactions, and root-caused business-critical production incidents end-to-end. Independently architected and operated a full AWS production stack as code (Terraform) with CI/CD, monitoring, and blue-green deployment, while building the UI on top of it. Strong in Java, Spring Boot, REST API design, PostgreSQL, and distributed-systems fundamentals.

TECHNICAL SKILLS

Backend & Distributed Systems: Java (8 / 17 / 21), Spring Boot, Spring WebFlux (reactive, non-blocking), Spring Security, Hibernate / JPA, REST API design, Microservices, Temporal, event-driven architecture, saga pattern (orchestration & compensating transactions), two-phase commit (2PC), eventual consistency, idempotency, message queues (AWS SNS / SQS), asynchronous processing

Frontend: ReactJS, Redux, JavaScript, HTML5, CSS3, Tailwind CSS, Vite, Thymeleaf, component-driven design

Databases & Caching: PostgreSQL, SQL, MongoDB, Redis / AWS ElastiCache, caching strategies (eviction policies, TTL, session caching), JPA query optimization, indexing, schema design

Cloud, DevOps & Infrastructure: AWS (Elastic Beanstalk, RDS, S3, Lambda, SNS, SQS, ElastiCache, IAM, Route 53, ACM, ALB, CloudWatch), GCP, GKE, Terraform (IaC), Docker, Kubernetes, GitHub Actions CI/CD, OIDC, blue-green deployment

Practices & Tooling: System design, MVC architecture, JUnit, regression testing, root cause analysis, Git / GitHub, Agile, Maven, AI-assisted development (Claude Code, OpenAI Codex), LLMs, MCP (Model Context Protocol)

PROFESSIONAL EXPERIENCE

Founding Engineer — Full Stack & Platform | May 2026 – Present

Bodh Sea (Production Social Platform) • Remote • [bodhsea.in](#)

- Built and shipped a production full-stack social platform solo — backend, UI, cloud infrastructure, and operations — on **Java 21, Spring Boot 3.4.2, PostgreSQL, Hibernate, Spring Security, and Thymeleaf**, delivering rich-media posts, a follow graph, reactions, threaded comments, bookmarks, and a repost system.
- Designed an **event-driven notification pipeline** on AWS SNS → SQS → Lambda delivering across three channels (email, push, in-app), decoupling asynchronous work from the request path for independently deployable, testable services.
- Architected the entire AWS production stack as code (Terraform) — Elastic Beanstalk, RDS PostgreSQL, direct-to-S3 uploads, ElastiCache Redis for horizontally scalable sessions, Route 53 / ACM / ALB for HTTPS — and executed a **blue-green migration** to a load-balanced, auto-scaling deployment.
- Owned production reliability: root-caused live incidents through CloudWatch and SSM log analysis, designed health checks and cache eviction policy, and drove capacity and cost sizing across compute, database, and cache tiers.
- Closed real security defects found through self-driven regression testing — an IDOR on post edit/delete and unverified-account data exposure — and fixed email deliverability via SendGrid domain authentication (SPF/DKIM/DMARC).
- Shipped CI/CD with GitHub Actions → Elastic Beanstalk over OIDC federation, removing long-lived credentials from the deployment pipeline.

Software Development Engineer (Full Stack) | Mar 2025 – Apr 2026

JSW One Platform (B2B Supply Chain) • Mumbai, India

- Designed **saga-orchestrated Temporal workflows with compensating transactions** across Order Management, shipment, invoicing, and connector services — avoiding **two-phase commit (2PC)** across service boundaries while keeping multi-step distributed transactions durable, replayable, and resumable after partial failure.
- Owned data consistency across ERP synchronization streams — block creation, delivery orders, credit, and invoicing — on a platform processing **₹2,000 Cr+** in transactions; eliminated recurring sync failures and REST API errors that caused records to diverge between distributed services.
- Automated the end-to-end Purchase Order creation workflow, reducing manual intervention by **99%** and raising workflow success rate to **98.5%** across enterprise procurement operations.
- Led root cause analysis on business-critical production incidents spanning scheduler execution, REST integrations, and third-party connectors (Zoho, Salesforce), converting recurring failures into permanent fixes.
- Built and enhanced ReactJS interfaces for order, shipment, and invoicing workflows, collaborating with product and engineering across a cross-functional, distributed team.

Tech: Java, Spring Boot, Temporal, Microservices, PostgreSQL, SQL, ReactJS, REST APIs, GCP, GKE, Maven

SDE Trainee | Dec 2024 – Feb 2025

Mountblue Technologies • Bengaluru, India

- Selected into Mountblue's engineering cohort; built and shipped a full-stack MVC application with authentication, role-based authorization, nested commenting, and RESTful APIs on Spring Boot, PostgreSQL, and Hibernate, applying clean, testable, maintainable design principles.

Earlier Experience | 2022 – 2024

UI/UX Intern, Coding Samurai — prototyped a mobile app in Figma with a reusable component system published to the Figma Community. • Research Intern, EDERA — led a 3-member team collecting real-estate and hotel market data across India and Dubai.

EDUCATION & ACHIEVEMENTS

Scaler Academy — Full Stack Developer Program | 2024

National Institute of Technology, Bhopal — M.Tech in Electrical Engineering | CGPA 9.06 / 10 | 2022

RGPV, Bhopal — B.E. in Electrical Engineering | CGPA 8.43 / 10 | 2020

- GATE 2020: 95th percentile • Top 1% (99.8) at Scaler Academy • 4th in dept, NIT Bhopal • 1,900+ DSA problems solved.
