SKILLS

Languages & Frameworks: Java (8 / 17 / 21), Spring Boot, Spring WebFlux (reactive, non-blocking), Spring Security, Hibernate / JPA, Thymeleaf, JavaScript, React, Redux, Vite, Node.js, HTML, CSS, Tailwind CSS

Backend & Architecture: REST API design, Microservices, MVC & layered architecture, Temporal workflows, event-driven architecture, message queues (AWS SNS / SQS), asynchronous processing, reactive programming, system design, distributed systems

Databases, Caching & Data: PostgreSQL, SQL, MongoDB, Redis / AWS ElastiCache, caching strategies (eviction policies, TTL, session caching), JPA / Hibernate query optimization, indexing, schema design, Hadoop

Cloud & DevOps: AWS (Elastic Beanstalk, RDS, S3, Lambda, SNS, SQS, ElastiCache, CloudWatch, SSM, IAM, Route 53, ACM, ALB), GCP, GKE, Terraform (Infrastructure as Code), Docker, Kubernetes, CI/CD (GitHub Actions), OIDC federation, blue-green deployment

Practices & Tooling: JUnit, regression testing, root cause analysis, production debugging, Git / GitHub, Agile, Maven, capacity & cost planning, AI-assisted development (Claude Code, OpenAI Codex), LLMs, MCP (Model Context Protocol)

EXPERIENCE

Founding Engineer — Full Stack | May 2026 – Present

Bodh Sea (Social Blogging Platform) · Remote · [bodhsea.in](#)

- Built Bodh Sea, a full-stack blogging and micro-social platform, solo end-to-end — product design, backend architecture, cloud infrastructure, and production operations — on Spring Boot 3.4.2, Java 21, PostgreSQL, Hibernate, Thymeleaf, and Spring Security.
- Designed and shipped core social features: rich-media posts, follow/unfollow, reactions, threaded comments, bookmarks, and a Twitter-style repost system, backed by a 3-channel (email/push/in-app) async notification pipeline on AWS SNS → SQS → Lambda.
- Architected and deployed the entire AWS production stack as code (Terraform): Elastic Beanstalk, RDS, direct-to-S3 media uploads, Route 53/ACM/ALB for custom-domain HTTPS, and ElastiCache Redis for horizontally scalable sessions — including a blue-green migration from a single-instance deployment to a load-balanced, auto-scaling one.
- Owned production reliability end-to-end: root-caused and resolved live incidents via CloudWatch/SSM log analysis, and fixed email deliverability by implementing SendGrid domain authentication (SPF/DKIM/DMARC).
- Closed real security gaps found through self-driven regression testing — an IDOR on post edit/delete, and unverified-account data exposure — and ran manual QA covering both new-feature paths and existing-data/authorization edge cases before every release.
- Set up CI/CD (GitHub Actions → Elastic Beanstalk via OIDC, no long-lived credentials) and drove cost/capacity planning across the stack (free-tier-optimized sizing, cache eviction policy, health-check design).

Tech Stack: Java, Spring Boot, PostgreSQL, Hibernate, Thymeleaf, Spring Security, AWS (Beanstalk, RDS, S3, Lambda, SNS/SQS, Route 53, ACM, ElastiCache, IAM), Terraform, GitHub Actions, SendGrid

Software Development Engineer (Full Stack) | Mar 2025 – Apr 2026

JSW One Platform (B2B Supply Chain) · Mumbai, India

- Automated the end-to-end Purchase Order (PO) creation workflow, improving system stability to 98.5% and reducing manual intervention by 99% across enterprise procurement operations.
- Delivered production fixes for ERP synchronization issues spanning block creation, scheduler execution, Delivery Order (DO), credit, and invoice synchronization, stabilizing workflows supporting transactions exceeding ₹2,000 Cr while eliminating recurring REST API failures.
- Designed scalable Temporal workflows and enhanced Order Management, shipment, invoicing, connector, Zoho, and Salesforce integrations, ensuring reliable asynchronous execution and seamless data synchronization across distributed services.
- Led production debugging and root cause analysis of business-critical incidents, partnering with engineering and product teams to improve system reliability and reduce recurring production issues.

Tech Stack: Java, Spring Boot, Temporal, PostgreSQL, Maven, ReactJS, GCP, GKE, Conduit Framework

SDE Trainee | Dec 2024 – Feb 2025

Mountblue Technologies · Bengaluru, India

- Developed a full-stack blogging platform to enable users to securely publish, manage, and discuss content using Spring Boot, PostgreSQL, Hibernate, Thymeleaf, and Spring Security.
- Implemented authentication, role-based authorization, post management, comments, and RESTful APIs following MVC architecture and clean coding principles.
- Collaborated with cross-functional team members during system design and feature implementation to deliver scalable, maintainable application components.

Tech Stack: Thymeleaf, Java, Hibernate, System Design

UI/UX Intern | May 2024 – Jun 2024

Coding Samurai (E-Learning Platform) · Remote · [Food Recipe App — Figma](#)

- Designed and prototyped a food recipe application in Figma, developing reusable UI components, responsive layouts, and interactive user journeys.
- Used Figma Auto Layout, Components, and Prototyping to create a scalable design system, and shared the project publicly on the Figma Community.

Research Intern | Nov 2022 – Jan 2023

EDERA (E-Learning Platform) · Remote

- Conducted in-depth research on the real estate and hotel sectors and created a comprehensive database that improved market insights and informed business strategies.
- Led a 3-member team in exploring and collecting data from the India and Dubai markets, significantly enhancing lead generation and data organization efforts.

Tech Stack: MS Excel, data scraping tools

ACHIEVEMENTS

- Qualified GATE 2020 with a 95th percentile, demonstrating strong proficiency in engineering concepts and problem-solving skills.
- Ranked 4th in the Department at National Institute of Technology, Bhopal, and 7th in the Electrical Engineering Department at RGPV, reflecting consistent academic excellence and a commitment to continuous learning.
- Ranked in the top 1% at Scaler Academy with a 99.8 percentile.
- Completed NPTEL courses on Analog Electronics and Control Systems, gaining in-depth knowledge and practical skills in these engineering domains.
- Solved over 1,000 problems on Scaler, 600+ on LeetCode, and 280+ on CodeChef within 10 months, underscoring strong analytical and coding abilities.

EDUCATION

Scaler Academy — Full Stack Developer Program | 2024

National Institute of Technology, Bhopal — M.Tech in Electrical Engineering | CGPA 9.06 | 2022

RGPV, Bhopal — B.E. in Electrical Engineering | CGPA 8.43 | 2020
